Programming Concepts and Methodology to C++

September 19, 2018

## Lab Assignments 2

In the first video, Dennise Ritchie spoke of UNIX and the process of how it was created. He discussed how Linux is used in just about everything digital such as phones, tablets, and MAC OS 10. In the second video Bjarne goes into detail on why C++ was created. He invented the classes in the language to represent a concept and allow the users to organize everything in their program and make it easy to understand. He also spoke of how it was a very complex language and also how it is efficient and closer to the hardware. In the third video on The UNIX Operating system they spoke of the differences of software and hardware, discussed all the useful parts of UNIX and all of the benefits. In the last video, the creator of linux discussed how everything works and how the environment he works in helps him work.
